POLS Y673 Fall 2010
Class #15799
INSTITUTIONAL ANALYSIS AND DEVELOPMENT: MICRO
Elinor Ostrom
Tuesdays, 3:00-5:00 p.m.

Workshop in Political Theory and Policy Analysis
513 North Park Avenue
IUB

SYLLABUS

Preface

The central questions underlying this course are:

- How can *fallible* human beings achieve and sustain self-governing entities and self-governing ways of life as well as sustaining ecological systems?
- When we state that institutions facilitate or discourage effective problem-solving and innovations, what do we mean by institutions and what other factors affect these processes?
- How do we develop better frameworks and theories to understand behavior that has outcomes at multiple scales (e.g. household use of electricity affecting household budget and health, as well as community infrastructure and investments, and the global atmosphere)?

To address these questions we will have to learn a variety of tools to understand how fallible individuals behave within institutions as well as how they can influence the rules that structure their lives. This is a particularly challenging question in an era when global concerns have moved onto the political agenda of most international, national, and even local governing bodies without recognizing the importance of the local for the global. Instead of studying how individuals craft institutions, many scholars are focusing on how to understand global phenomena. It is also an era of substantial violence, terrorism, and disruption. Many of the problems we are witnessing today are due to a lack of understanding of the micro and meso levels that are essential aspects of global processes.

In our effort to understand self-governance, we will be studying the four “I’s”: individuals, incentives, institutions, and inquiry.

To understand processes at any level of organization, one needs to understand the *individuals* who are participants and the incentives they face. When we talk about “THE” government doing X or Y, there are individuals who hold positions in a variety of situations within “THE” government. We had better understand how individuals approach making decisions in a variety of situations given the incentives they face. Those *incentives* come from a variety of sources, but a major source, particularly in the public sector, are the rules of the game they are playing. *Institutions* include the rules that specify what may, must or must not be done in situations that are linked together to make up a polity, a society, an economy, and their inter-linkages. To understand this process we must be engaged in an *inquiry* that will never end.

The settings we study are complex, diverse, multi-scaled, and dynamic. Thus, we need to develop frameworks that provide a general language for studying these complex, multi-scaled systems. And, we

can learn a variety of theories (and models of those theories) that help us understand particular settings. We cannot develop a universal theory of actions and outcomes in all settings for all time. Thus, our task of inquiry is a lifelong task. And, the task of citizens and their officials is also unending. No system of governance can survive for long without commonly understood rules and rule enforcement. Rule enforcement relies on varying degrees of force and potential use of violence. Consequently, we face a Faustian bargain in designing any system of governance.

A self-governing entity is one whose members (or their representatives) participate in the establishment, reform, and continued legitimacy of the constitutional and collective choice rules-in-use. All self-organized entities (whether in the private or public spheres) are to some extent self-governing. In modern societies, however, it is rare to find any entity whose members (or their representatives) have fashioned *all* of the constitutional and collective-choice rules that they use. Some rules are likely to have come from external sources. Many rules will have come from earlier times and are not discussed extensively among those using the rules today.

On the other hand, even in a totalitarian polity, it is difficult for central authorities to prevent all individuals from finding ways of self-organizing and creating rules of their own. Some of these may even be contrary to the formal laws of the totalitarian regime. Given that most modern societies have many different entities, let me rephrase the first question on page one: How can fallible individuals achieve and sustain large numbers of small, medium, and large-scale, self-governing entities in the private and public spheres?

We cannot thoroughly understand the diverse processes of self-governance in any semester-long or year-long course of study. How humans can govern themselves is a question that has puzzled and perplexed the greatest thinkers of the last several millennia. Many have answered that self-governance is impossible. In this view, the best that human beings can do is live in a political system that is imposed on them and that creates a predictable order within which individuals may be able to achieve a high level of physical and economic well-being without much autonomy. In this view, the rules that structure the opportunities and constraints facing individuals come from outside, from what is frequently referred to as “the state.”

For other thinkers, rules are best viewed as spontaneously emerging from patterns of interactions among individuals. In this view trying to design any type of institution, whether to be imposed on individuals or self-determined, is close to impossible or potentially disastrous in its consequences. Human fallibility is too great to foretell many of the consequences that are likely to follow. Efforts to design self-governing systems, rather than making adaptive changes within what has been passed along from past generations, involves human beings in tasks that are beyond their knowledge and skills.

The thesis that we advance in this seminar is that individuals, who seriously engage one another in efforts to build mutually productive social relationships – and to understand why these are important – are capable of devising ingenious ways of relating constructively with one another. The impossible task, however, is to design *entire* social systems “from scratch” at one point in time that avoid the fate of being monumental disasters. Individuals, who are willing to explore possibilities, consider new options as entrepreneurs, and to use reason, as well as trial and error experimentation, can evolve and design rules, routines, and ways of life that are likely to build up to self-governing entities with a higher chance of adapting and surviving over time than top-down designs. It takes time, however, to learn from errors and try to find the source of the error and how to improve one part of the system without generating adverse consequences elsewhere.

Successful groups of individuals may exist in simple or complex nested systems ranging from very small to very large. The problem is in a complexly interrelated world, one needs effective organization at all

levels ranging from the smallest work team all the way to international organizations. If the size of the group that is governing and reaping benefits is too small, negative externalities are likely to occur. Further, even in small face-to-face groups, some individuals may use any of a wide array of asymmetries to take advantage of others. Individuals who are organized in many small groups nested in larger structures – a polycentric system – may find ways of exiting from some settings and joining others. Or, they may seek remedies from overlapping groups that may reduce the asymmetries within the smaller unit. If the size of the group that is governing and reaping benefits is too large, on the other hand, essential information is lost, and further, the situation may again be one of exploitation.

Scale and complex nesting are only part of the problem. Another part has to do with how individuals view their basic relationships with one another. Many individuals learn to be relatively truthful, considerate of others, trustworthy, and willing to work hard. Others are opportunistic. Some approach governance as involving basic problem-solving skills. Some approach governance as a problem of gaining dominance over others. The opportunities for dominance always exist in any system of rule-ordering where some individuals are delegated responsibilities for devising and monitoring conformance to rules and sanctioning rule breakers. Those who devise self-governing entities that work well only when everyone is a “saint” find themselves invaded by “sinners” who take advantage of the situation and may cause what had initially worked successfully to come unglued and fail.

Thus, the initial answer to the first question on Page 1 is: Self-governance is possible in a setting, if . . .

- most individuals share a common broad understanding of the biophysical, cultural, and political worlds they face; of the importance of trying to follow general principles of trust, reciprocity, and fairness; and of the need to use artisanship to craft their own rules;
- most individuals have significant experience in small to medium-sized settings where they learn the skills of living with others, being responsible, gaining trust, being entrepreneurial, and holding others responsible for their actions;
- considerable autonomy exists for constituting and reconstituting relationships with one another that vary from very small to very large units (some of which will be highly specialized while others may be general-purpose organizations);
- individuals learn to analyze the incentives that they face in particular situations (given the type of physical and cultural setting in which they find themselves) and to try to adjust positive and negative incentives so that those individuals who are most likely to be opportunistic are deterred or sanctioned.

The above is posed as a “possibility” not a determinate outcome. In other words, we view self-governing entities as fragile, social artifacts that individuals may be able to constitute and reconstitute over time. A variety of disturbances are likely to occur over time and a key question is to what kind of disturbances is a self-organized governance system robust? We can make scientific statements about the kinds of results that are likely if individuals share particular kinds of common understandings, are responsible, have autonomy, possess analytical tools, and consciously pass both moral and analytical knowledge from one generation to the next. These are strong conditions!

With this view, small, self-governing entities may exist as an enclave in the midst of highly authoritarian regimes. This may not be a stable solution, but self-governance may provide opportunities to develop productive arrangements for those who establish trust and reciprocity backed by their own willingness to monitor and enforce interpersonal commitments. If the macro structure is not hostile or even supports

and encourages self-organization, what can be accomplished by smaller private and public enclaves can be very substantial. This is initially a bottom-up view of self-governance. Productive, small-scale self-organization, however, is difficult to sustain over time in a larger political system that tries to impose uniform rules, operates through patron-client networks or uses terror to sustain authoritarian rule. Having vigorous local and regional governments and many types of voluntary associations is part of the answer but not sufficient in and of itself.

Simply having national elections, choosing leaders, and asking them to pass good legislation is hardly sufficient, however, to sustain a self-governing society over the long run. Electing officials to national office and providing them with “common budgetary pools” of substantial size to spend “in the public interest” creates substantial temptations to engage in rent-seeking behavior and distributive politics. The central problem is how to embed elected officials in a set of institutions that generates information about their actions, holds them accountable, allows for rapid response in times of threat, and encourages innovation and problem solving. Solving such problems involves the design of a delicately balanced system. It requires decisions from sophisticated participants who understand the theory involved in constituting and reconstituting such systems and share a moral commitment to the maintenance of a democratic social order.

Now, what is the role of the institutional analyst in all of this? Well, for one, it is essential for those who devote their lives to studying the emergence, adaptation, design, and effects of institutional arrangements to understand a very wide array of diverse rules that exist in an equally diverse set of physical and cultural milieus. To understand how various rules may be used as part of a self-governing society, one has to examine how diverse rules affect the capacities of individuals to achieve mutually productive outcomes over time or the dominance of some over others. Eventually, one has to examine constellations of embedded institutional arrangements rather than isolated situations. And, one has to examine the short-run and long-run effects of many different types of rules on human actions and outcomes. Further, one has to acquire considerable humility regarding exactly how precise predictions can be made about the effects of different rules on incentives, behavior, and outcomes achieved. Design of successful institutions may indeed be feasible. Designed institutions, which tend to generate substantial information rapidly and accurately and allow for the change of rules over time in light of performance, are more likely to be successful than those resulting from “grand designs” for societies as a whole.

To be an institutional analyst, one needs to learn to use the best available theoretical tools, while at the same time trying to develop even better theories and conducting further empirical studies that contribute to our theoretical understanding of self-governing systems. All tools have capabilities and limits. The task of the skilled artisan – whether an institutional theorist or a cabinetmaker – is to learn the capabilities and limits of relevant tools and how best to use a combination of tools to address the wide diversity of puzzles that one comes across in a lifetime of work.

Relevant tools are plentiful in the sense that we do have an extensive body of political, social, and economic theory that focuses on the impact of diverse rules on the incentives, behavior, and likely outcomes within different settings. These tools are limited, however, in that many of the most rigorous theories make assumptions both about the individual and about the settings within which individuals find themselves. This can be problematic for explaining behavior in many settings. These explicit, and often implicit, assumptions may mask some of the deeper problems of sustaining democratic systems over time. Many of the difficult problems that human beings face in trying to develop and sustain democratic organizations are assumed away when one starts with assumptions that individuals have complete and perfect information and can make error-free calculations about expected consequences for themselves and no one else in complex, uncertain worlds.

Further, when assumptions are made that the structure of the situations facing individuals are fixed and

cannot be changed by those in the situation, little effort is devoted to addressing how individuals affect their own situations. Yet these same assumptions (full information and fixed structures) are useful when the analyst wants to examine the expected, short-term outcomes of an institutional and physical setting where the options available to individuals are narrowly constrained and where individuals have many opportunities to learn about the costs and benefits of pursuing diverse options. Learning which assumptions, theories, and models to use to analyze diverse institutional arrangements combined with diverse settings is an important aspect of the training of institutional analysts.

During this seminar, we will use a variety of theoretical tools. These will help us to understand the Institutional Analysis and Development (IAD) framework that we have been developing over many years at the Workshop as well as the more recent Program for Institutional Analysis of Social-Ecological Systems (PIASES) framework. The skilled institutional analyst uses a framework to identify the types of questions and variables to be included in any particular analysis. The artisan then selects what is perceived to be the most appropriate theory available given the particular questions to be addressed, the type of empirical evidence that is available or is to be obtained, and the purpose of the analysis. For any one theory, there are multiple models of that theory that can be used to analyze a focused set of questions. Choosing the most appropriate model (whether this is a mathematical model, a simulation, a process model or the design for an experiment) also depends on the particular puzzle that an analyst wants to examine.

Objectives of the Seminar

Given the above background to the substantive focus of this seminar, let us try to present the central objectives for the semester as we see them. The objectives are:

- To understand the constraints and opportunities of human artisanship and entrepreneurship.

If self-governance within any particular organizational setting is only a possibility and not a necessity, then students of self-governance need to understand the constraints on choice presented by the structure of a physical, biological, and social world at any particular point in time as well as the opportunities of using human insight, reason, persuasion, and vigilance to transform inherited structures.

- To learn how to use the IAD framework and the related PIASES framework for analyzing SESs as tools for understanding the commonalities underlying entities that are often treated by diverse disciplines as fundamentally different things.

Markets and states are frequently posed as opposite types of entities. Those who study the American Presidency or the American Congress sometimes view what they study as entirely different from European Parliamentary systems or some of the national systems of Africa or of Asia. We will instead use a common set of elements to analyze repetitive relationships within and across markets, hierarchies, local communities, private associations, families, churches, regional governments, national governments, multi-national corporations, and international regimes.

- To learn some very basic elements of game theory as *one* of the theories that is consistent with the IAD framework and to gain some knowledge of simple games, but this is really a very basic introduction and not a course on game theory.

Game theory is emerging as one of the theoretical tools in heavy use across all of the social

sciences (as well as in biology). Game theory is useful for the institutional analyst when trying to understand the patterns of outcomes that result from the operation of repetitive situations over time when the motivational structure of participants is clearly understood. It also provides a theoretical tool for analyzing what to expect when rules are changed. As will become obvious in the semester, there are also many perplexing issues that are not yet resolved both about the theory of games and its applications to the study of institutions. We will do some reading drawing more on an evolutionary perspective and how this perspective combined with game theory helps us understand some of the above issues. And, we will also begin to study the growing field of agent-based modeling.

- To recognize core problems that humans repeatedly face in a wide diversity of settings such as those involved in providing and regulating the use of public goods, common-pool resources, asymmetric information problems, adverse selection problems, moral hazard problems, aggregation of preferences problems, team coordination problems, principal-agent problems, and the problems of constituting complex orders under incomplete information.

Learning how to recognize the key symptoms of the core problems that humans repeatedly face is essential for institutional analysts. Diagnosis of the source(s) of the problems involved in a simple or complex setting is necessary prior to effective advice about the types of rules, norms, and strategies that have a chance to improve on outcomes.

- To understand how polycentric political systems, including but not limited to federal ones, operate based on principles learned from this course.

An irony exists in the contemporary world. This problem is at the heart of recent controversies about how to govern America and how to solve problems in the developing world. The recent policy focus on devolution in developing countries has emphasized shifting responsibility from national to state and local level. As this has been happening, the national governments have frequently continued to seek control but not implementation of many programs. One needs to dig into proposals for decentralization to see what is being devolved and HOW before one can even begin to evaluate these.

- To share with colleagues how to analyze three new policy arenas that are relatively new for scholars at the Workshop: Climate Change, Health Care as a Commons, and Neighborhood Sustainability in Urban Areas.
- To understand the importance of respecting the assets and limits of diverse disciplines and core research methods that are used to undertake careful empirical studies of the institutions and their operations in diverse environments.

Many of the theoretical questions of interest to an institutional analyst can be studied using individual case studies, meta-analyses of existing case studies, large-N field studies, formal theory, experimental research, and agent-based modeling. No one person can become an expert in all of these methods, but scholars need to overcome their suspicion of methods developed by others and recognize that learning cumulates faster and better if careful research has been undertaken with complementary research methods. One also needs to learn the limits of each method.

- To conduct an institutional analysis of an important and interesting puzzle relating to human behavior in a rule-ordered setting at a local, regional, national or international domain.

Each enrolled student and visiting scholar will write a paper to be presented at the Mini-Conference on **December 13-14** that is an institutional analysis of a structured situation or linked set of situations that generate outcomes that are either puzzling, deemed inefficient, inequitable, unsustainable or in need of change. It is also important to study situations that have generated productive outcomes and are worthy of emulation and to identify what aspects of the structure, and human behavior within that structure, that has led to positive results.

Procedures and Requirements for the Fall Semester

During the fall semester of this year-long course, we try to provide an overview of the literature focusing on the analysis of the incentives facing individuals within various types of institutional arrangements. Many of the topics covered here in one week could well be the topic of a full semester's work in some other course or seminar. Thus, once you have completed this fall's work, you will have been introduced to a diversity of work. You will not yet have gained mastery and will need substantial further inquiry to gain that mastery. Fortunately, there are several other courses offered regularly in the Department of Political Science, the Department of Economics or the School of Public and Environmental Affairs that can be taken to gain additional mastery. For some subjects, we have listed additional readings that you may wish to pursue during this semester or later in your academic career on those topics of particular interest and importance to you.

The assigned readings will either be available online through Oncourse under Resources (<https://oncourse.iu.edu/portal>), distributed at least one week in advance or be available at the IU Bookstore.

McGinnis, Michael D., ed. 1999. *Polycentricity and Local Public Economies*. Ann Arbor: University of Michigan Press. [IU Bookstore]

McGinnis, Michael D., ed. 2000. *Polycentric Games and Institutions: Readings from the Workshop in Political Theory and Policy Analysis*. Ann Arbor: University of Michigan Press. [IU Bookstore]

Ostrom, Elinor. 2005. *Understanding Institutional Diversity*. Princeton: Princeton University Press. [IU Bookstore]

Poteete, Amy, Marco Janssen, and Elinor Ostrom. 2010. *Working Together: Collective Action, the Commons, and Multiple Methods in Practice*. Princeton: Princeton University Press. [IU Bookstore]

Graduate students taking the course for credit have four types of assignments. First, each student is expected to write a short (1-3 pages) memo to be distributed among participants in the class every second week starting **September 7**. Students should reflect on what they are currently reading and related topics. From time to time, I might ask for comments on a particular subject. Memos should be posted to Oncourse under Messages for all class participants to read, and they are due **Sunday evening by 5:00 p.m.** These memos are not individually graded, but 20% of the final grade will be based on class participation, and the faithfulness and quality of the memos will be reflected in this part of the grade.

Second, a take-home exam will be given out during the week before finals. It will be due on the Monday afternoon of finals week. This exam is worth 30% of your grade. You will be involved in preparing the study questions for this exam.

Third, a final paper is required. Each student and visiting scholar will be expected to select either a type of problem (such as that of providing a particular type of public good or common-pool resource) or a type

of decision-making arrangement (such as that of a legislature, a court or a self-organized collectivity) and undertake an analysis of how combinations of rules, the structure of the goods and technology involved, and culture interact to affect the incentives facing individuals and resulting patterns of interactions adopted by individuals. The student may focus on an operational, a collective choice or a constitutional-choice level, but the linkage among these levels should be addressed. Some participants are interested in large-scale phenomena and will want to examine international or national regimes. Others will focus on a smaller scale of organizations. Some may want to address the “scaling up” and “scaling down” question in institutional analysis.

This is an excellent opportunity to do a research design for a dissertation that applies institutional analysis to a particular problem. Students and visiting scholars may wish to do the first draft of a paper that eventually will be submitted for publication. All papers will be presented at a Mini-Conference at the end of the semester. The final paper is due before class on **Tuesday, December 7** and constitutes 50% of the final grade. Students and visiting scholars should submit their papers in PDF format. Specific instructions on how to submit will be distributed closer to the Mini-Conference. Since learning how to make deadlines is an essential skill for all academics, this deadline is taken *very seriously*.

Fourth, active participation in the Mini-Conference itself is expected. The Mini-Conference at the end of the year (**December 13-14**) is the occasion during which visiting scholars, students in this seminar, and other Workshop colleagues present papers summarizing their work for the semester. The final paper will be presented at the Mini-Conference by someone other than the author who will then also provide an initial critique. The author will have an opportunity for immediate response, and there will be a general discussion of each paper clustered together on relevant panels.

Y673
SCHEDULE OF TOPICS: FALL TERM 2010

Week 1: August 31	Introduction to the Seminar
Week 2: September 7	An Introduction to the Study of Institutions and the IAD Framework as an Approach to the Study of Complex Systems, and Collective Action Dilemmas
Week 3: September 14	Studying Linked Social-Ecological Systems
Week 4: September 21	Program for Institutional Analysis of Social-Ecological Systems (Michael McGinnis and Michael Cox)
Week 5: September 28	Rational Choice Theory and Behavioral Theories of Human Action
Week 6: October 5	Learning from Experiments
Week 7: October 12	Doing an Experiment in the Lab
Week 8: October 19	Polycentric Approaches to Policy
Week 9: October 26	Policy Application: Health Care as a Commons
Week 10: November 2	Policy Application: Sustainable Urban Neighborhoods
Week 11: November 9	Applications of IAD or PIASES to your Puzzles
Week 12: November 16	Bureaucratic Forms of Organization and their Potential Control
Week 13: November 23	Thanksgiving Break – NO CLASS!!
Week 14: November 30	Puzzles and Challenges of Development
Week 15: December 7	Further Development of PIASES Framework (Michael McGinnis and Michael Cox)
MINI-CONFERENCE: December 13-14	

WEEKLY TOPICS, ASSIGNED READINGS, AND SUPPLEMENTAL READINGS

Week 1: August 31 - An Overview of the Seminar: Frameworks, Theories, and Models to Analyze and Understand Institutional Incentives and Outcomes

Each member of the seminar will be expected to read the preface for the syllabus (and to have glanced at the rest of it) and to have begun to think about how their own work might be related to the general work to be covered during the fall semester. We will discuss the general organization of the fall semester's work. There are several key issues that we will discuss during this class. They include:

- The differences among frameworks, theories, and models - and how various theories (and models of these theories) can be used to analyze particular questions using the institutional analysis framework;
- The importance of both static and dynamic analyses when thinking about institutional questions;
- When single-level analysis is appropriate and when multiple levels of analysis should be invoked;
- Thinking about whole systems and thinking about parts;
- Understanding the difference between proximate and ultimate causes;
- Thinking about decomposable systems; and
- Thinking about impossible and possible rather than only necessary and sufficient.

A central theme of the entire year's seminar is that human organization is the result of layers and layers of conscious and unconscious structuring - both within the single individual and within any organized polity. To study institutions, there is no single, correct level of analysis. To ask any particular theoretical or empirical question, however, an analyst can generate more useful information by starting to address that question at one level instead of others. The reading about an American sport - when only the surface features are discussed and "explained" - will hopefully make you think about how we can dig below what we see happening before us. We are all engaged in the craft of science as Dyson so well articulates.

I am assigning this week Michael McGinnis' "simple guide" to the IAD framework - you do not need to memorize all of the terms in this guide. Hopefully, you will keep it near you and when you come across new terms check it out. Mike would also like to know any terms that he needs to examine further in the next version of the guide.

Essential Readings for Week 1:

This Syllabus

"A Psycho-Cultural Interpretation of an American Sport," from the *Chicago Maroon*, October 14, 1955.

***Oncourse**

Dyson, Freeman. 1998. "Science as a Craft Industry." *Science* 280 (May 15): 1,014-1,015. ***Oncourse**

McGinnis, Michael. 2010. "An Introduction to IAD and the Language of the Ostrom Workshop: A Simple Guide to a Complex Framework for the Analysis of Institutions and their Development."

***Oncourse**

Ostrom, Elinor. 2010. "Beyond Markets and States: Polycentric Governance of Complex Economic Systems." *American Economic Review* 100(3) (June): 641-672. ***Oncourse – R10-15**

Poteete, Amy, Marco Janssen, and Elinor Ostrom. 2010. Chapter 1: "Overcoming Methodological Challenges." In *Working Together: Collective Action, the Commons, and Multiple Methods in Practice*, 3-27. Princeton: Princeton University Press. ***Required Text**

Week 2: September 7 - An Introduction to the Study of Institutions and the IAD Framework as an Approach to the Study of Complex Systems, and Collective Action Dilemmas

Much of our training as social scientists has been to focus on the analysis of simple, static, one-layer situations. This does not prepare us for analyzing complex, multi-level systems that evolve over time as organisms adapt through trial and error, imitation, and other mechanisms. We need to understand more of how human institutions have evolved and how we can survive and flourish in complex adaptive systems.

In this week, we will address basic foundation at a micro level involving the recognition of systems within systems within systems.

The concept of an action situation is one way to identify the "smallest relevant unit of analysis" for comparative research. These concepts have been used to design (1) the various Workshop databases developed to study the effects of institutions on incentives to provide and appropriate from common-pool resources; (2) many of our qualitative studies; (3) game theoretical analyses; and (4) experimental studies in the laboratory. One way of modeling a theory of how a particular action situation is structured, the likely behavior of participants, the consequences that are likely to be produced, and an evaluation of those consequences is by using formal game theory. The language of game theory is being used across the social sciences to analyze a wide diversity of interesting questions.

To overcome collective action dilemmas, participants need to devise rules that reasonably cope with the temptations of the situation they face. This is not a simple task given the large number of variables involved. It frequently requires considerable entrepreneurship to bring new structure to the "games" involved. Part of the solution is designing appropriate rules.

Essential Readings for Week 2:

Blomquist, William, Ariel Dinar, Karin E. Kemper. 2010. "A Framework for Institutional Analysis of Decentralization Reforms in Natural Resource Management." *Society and Natural Resources* 23(7): 620-635. ***Oncourse**

Crawford, Sue E. S., and Elinor Ostrom. 2000. Chapter 4: "A Grammar of Institutions." In *Polycentric Games and Institutions: Readings from the Workshop in Political Theory and Policy Analysis*, 114-155. Ann Arbor: University of Michigan Press. ***Required Text**

Hupe, Peter. 2010. "Models of the Policy Process." Draft entry for *IPSA Encyclopedia of Political Sciences*.

Ostrom, Elinor. 2000. Chapter 3: "An Agenda for the Study of Institutions." In *Polycentric Games and Institutions: Readings from the Workshop in Political Theory and Policy Analysis*, 89-113. Ann Arbor: University of Michigan Press. ***Required Text**

- _____. 2005a. Chapter 1: “Understanding the Diversity of Structured Human Interactions.” In *Understanding Institutional Diversity*, 1-31. Princeton: Princeton University Press. ***Required Text**
- _____. 2005b. Chapter 2: “Zooming In and Linking Action Situations.” In *Understanding Institutional Diversity*, 32-68. Princeton: Princeton University Press. ***Required Text**
- Poteete, Amy, Marco Janssen, and Elinor Ostrom. 2010. Chapter 2: “Small-N Case Studies: Putting the Commons Under a Magnifying Glass.” In *Working Together: Collective Action, the Commons, and Multiple Methods in Practice*, 31-63. Princeton: Princeton University Press. ***Required Text**
- Simon, Herbert A. 2000. “Public Administration in Today’s World of Organizations and Markets.” *PS: Political Science and Politics* 33(4) (December): 749-756. ***Oncourse**
- Weinstein, Martin S. 2000. “Pieces of the Puzzle: Solutions for Community-Based Fisheries Management from Native Canadians, Japanese Cooperatives, and Common Property Resources.” *Georgetown International Environmental Law Review* 12(2):375-412. ***Oncourse**
- Wilson, James. 2002. “Scientific Uncertainty, Complex Systems, and the Design of Common-Pool Institutions.” In *The Drama of the Commons*, ed. Elinor Ostrom, Thomas Dietz, Nives Dolšak, Paul C. Stern, Susan Stonich, and Elke U. Weber, 327-359. Washington, DC: National Academy Press. ***Oncourse**

Supplemental Readings:

- Aligica, Paul, and Peter Boettke, 2009. *Challenging Institutional Analysis and Development. The Bloomington School*. New York: Routledge. ***This is a very useful overview of the work we have been doing here at the Workshop. Useful for the semester.**

Supplementary Readings on IAD Framework:

The IAD framework has been described by many Workshop colleagues. Developments include:

- Kiser, Larry, and Elinor Ostrom. 1982. “The Three Worlds of Action: A Metatheoretical Synthesis of Institutional Approaches.” In *Strategies of Political Inquiry*, ed. Elinor Ostrom, 179-222. Beverly Hills, CA: Sage. Reprinted in McGinnis (2000), Chapter 2.
- Oakerson, Ronald. 1992. “Analyzing the Commons: A Framework.” In *Making the Commons Work: Theory, Practice, and Policy*, ed. Daniel W. Bromley, et al., 41-62. San Francisco, CA: ICS Press.
- Ostrom, Elinor. 1987. “An Agenda for the Study of Institutions.” *Public Choice* 48:3-25. Reprinted in McGinnis (2000), Chapter 3.
- _____. 2007. “Institutional Rational Choice: An Assessment of the Institutional Analysis and Development Framework.” In *Theories of the Policy Process*, 2nd ed., ed. Paul A. Sabatier, 21–64. Boulder, CO: Westview Press.
- Ostrom, Elinor, Roy Gardner, and James Walker. 1994. *Rules, Games, and Common-Pool Resources*, Chapter 2. Ann Arbor: University of Michigan.
- Sproule-Jones, Mark. 1993. *Governments at Work: Canadian Parliamentary Federalism and Its Public Policy Effects*. Toronto: University of Toronto Press.
- Thomson, James. 1992. *A Framework for Analyzing Institutional Incentives in Community Forestry*. Rome: Food and Agriculture Organization of the United Nations.

Similar efforts to identify a “smallest relevant unit of analysis” have used such terms as: collective structures, transactions, frames, and the other terms listed below. The following is an initial bibliography of key works that describe other efforts to identify units of analysis that are very similar to the concept of

an action situation:

Collective Structure:

Allport, F. H. 1962. "A Structuronomic Conception of Behavior: Individual and Collective." *Journal of Abnormal and Social Psychology* 64:3-30.

Events:

Appleyard, Roger. 1987. "Events and Acts: The Structure of their Effects." *Behavioral Science* 32:92-105.

Heise, David R. 1979. *Understanding Events: Affect and the Construction of Social Action*. New York: Cambridge University Press.

Frames:

Goffman, Irving. 1974. *Frame Analysis: An Essay on the Organization of Experience*. Cambridge, MA: Harvard University Press.

Logic of the Situation:

Farr, James. 1985. "Situational Analysis: Explanation in Political Science." *Journal of Politics* 47(4) (November): 1085-1107.

Popper, Karl. 1961. *The Poverty of Historicism*. New York: Harper & Row.

_____. 1976. "The Logic of the Social Sciences." In *The Positivist Dispute in German Sociology*, ed. T. W. Adorno. New York: Harper & Row.

Problematic Social Situations:

Raub, Werner, and Thomas Voss. 1986. "Conditions for Cooperation in Problematic Social Situations." In *Paradoxical Effects of Social Behavior: Essays in Honor of Anatol Rapoport*, ed. A. Diekmann and P. Mitter, 85-104. Heidelberg: Physical.

Scripts:

Schank, Roger C., and Robert P. Abelson. 1977. *Scripts, Plans, Goals, and Understanding: An Inquiry in Human Knowledge Structures*. Hillsdale, NJ: Lawrence Erlbaum Associates.

Transactions:

Commons, John R. 1968. "Transactions." In *Legal Foundations of Capitalism*, 64-142. Madison: University of Wisconsin Press.

Units of Meaning:

Barwise, Jon, and John Perry. 1983. *Situations and Attitudes*. Cambridge, MA: MIT Press.

For a book that is informed by formal game theory but is devoted to teaching future negotiators the logic of situations, see:

Raiffa, Howard. 1982. *The Art and Science of Negotiation*, Parts IV and V. Cambridge, MA: Harvard University Press.

Further Supplemental Readings for Week 2:

Akerloff, George A. and Janet L. Yellen. 1993. "Gang Behavior, Law Enforcement, and Community Values." In *Values and Public Policy*, ed. Henry J. Aaron, Thomas E. Mann and Timothy Taylor. Washington, D.C.: Brookings Institutions.

- Albert, Hans. 1989. "Law as an Instrument of Rational Practice." In *Contract and Organization: Legal Analysis in the Light of Economic and Social Theory*, ed. Terence Daintith and Gunther Teubner, 25-51 Berlin: de Gruyter.

Week 3: September 14 - Studying Linked Social-Ecological Systems

Workshop colleagues have been asked ever more frequently to address broad questions related to the sustainability of social *and* ecological systems over time. The National Academy of Science, for example, has added a section on "Sustainability Science" to its regular divisions of the *Proceedings of the National Academy of Sciences (PNAS)* and asked EO to be on the Editorial Board for *PNAS* to work on this new multi-disciplinary field. As a result, she organized a Special Feature with Marty Anderies and Marco Janssen of *PNAS* on "Beyond Panaceas: Crafting Diverse Institutional Arrangements for Governing Diverse Social-Ecological Systems."

We will discuss a class project for the rest of the semester related to filling out levels 2, 3, 4 and possibly 5 of a SES framework related to a problem of interest to you.

Essential Readings for Week 3:

- Agrawal, Arun. 2007. "Forests, Governance, and Sustainability: Common Property Theory and Its Contributions." *International Journal of the Commons* 1(1) (October): 111-136. ***Oncourse**
- Clark, William C., and Nancy M. Dickson. 2003. "Sustainability Science: The Emerging Research Program." *PNAS*. 100(14) (July 8): 8059-8061. ***Oncourse**
- McGinnis, Michael D., and John T. Williams. Chapter 7: "Policy Uncertainty in Two-Level Games: Examples of Correlated Equilibria." In *Polycentric Games and Institutions: Readings from the Workshop in Political Theory and Policy Analysis*, 202-236. Ann Arbor: University of Michigan Press. ***Required Text**
- Munasinghe, Mohan. 2010. Chapter 4: "Environmental and Social Systems." In *Making Development More Sustainable: Sustainomics Framework and Practical Applications*, 117-140. Sri Lanka: MIND Press. ***Oncourse**
- Ostrom, Elinor. 2007. "A Diagnostic Approach for Going Beyond Panaceas." *PNAS* 104(39) (September 25): 15181-15187. ***Oncourse – R07-17**
- _____. 2009. "A General Framework for Analyzing Sustainability of Social-Ecological Systems." *Science* 325(5939) (24 July): 419-422. ***Oncourse – R09-26**

Ostrom, Elinor, Marco A. Janssen, and John M. Anderies. 2007. "Going Beyond Panaceas." *PNAS* 104(39) (September 25): 15176-15178. ***Oncourse – R07-18**

Ostrom, Elinor, and Harini Nagendra. 2006. "Insights on Linking Forests, Trees, and People from the Air, on the Ground, and in the Laboratory." *PNAS* 103(51): 19224–19231. ***Oncourse – R06I-33**

Supplemental Readings:

Marshall, Graham. 2005. Chapters 5-8: *Economics for Collaborative Environmental Management: Renegotiating the Commons*. London: Earthscan.

Munasinghe, Mohan. 2010. "Sustainomics Framework." In *Making Development More Sustainable: Sustainomics Framework and Practical Applications*, 32-75. Sri Lanka: MIND Press. ***Oncourse**

Week 4: September 21 - Program for Institutional Analysis of Social-Ecological Systems

Scholars in Europe and the U.S. have become very interested in the SES framework that will be discussed in Week 4. The original intention of presenting that framework was to stimulate further thinking and discussion so that the new framework would evolve to be a useful language to link research undertaken across ecological and social disciplines. I had abbreviated the concept of an Action Situation in the *PNAS* and *Science* articles and used only "Interactions and Outcomes." Many colleagues urged that we re-introduce the concept of an Action Situation into the SES framework. Mike McGinnis has developed a concept paper that provides a very good way of thinking about linked action situations within a SES. Michael Cox and I also have dealt with how to apply these ideas to a very interesting field location – the Taos Valley of New Mexico where there are over 50 Acequias (irrigation systems based on earlier Spanish system designs) that have faced challenging environmental and then social problems over time.

Mike McGinnis and Michael Cox will lead the discussion this week. We will also include papers on the use of the IAD that will be presented at the APSA meetings in September and are being considered for a *Policy Studies Journal* special issue on institutional analysis.

Essential Readings for Week 4:

Clemente, Floriane. 2010. "Analysing Decentralised Natural Resource Governance: Proposition for a "Politicised" Institutional Analysis and Development Framework." *Policy Sciences* 43(2) (June): 129-156. ***Oncourse**

Cox, Michael, and Elinor Ostrom. 2010. "Applying a Social-Ecological System Framework to the Study of the Taos Valley Irrigation System Over Time." Paper presented at the 13th Economics of Infrastructures Conference, Delft University of Technology, Delft, Netherlands, May 27, 2010. ***Oncourse – W10-10**

McGinnis, Michael. 2010. "An Introduction to IAD and the Language of the Ostrom Workshop: A Simple Guide to a Complex Framework for the Analysis of Institutions and their Development." ***Oncourse – also assigned for Week 1.**

Page, Scott. Forthcoming. Chapter 8: "Diversity's Impact in Complex Systems." In *Diversity and Complexity*, 196-248. Princeton: Princeton University Press. ***Oncourse**

Week 5: September 28 - Rational Choice Theory & Behavioral Theories of Human Action

The neoclassical model of the individual used by economists in theoretical and empirical studies of market behavior has proved to be a robust and powerful model both for its usefulness in explaining choices in market situations and also as the foundation for explaining choices in other well-structured situations, including many collective action situations. Most game theoretic analyses of market and collective action settings use a very clearly specified model of the individual and of the situation in which the modeled individuals find themselves.

The assumptions of rational choice theory have been criticized on a number of fronts - primarily for their lack of reality. There is an extensive supplemental bibliography for this week for those who wish to read widely on the subject of rational choice. Given the very substantial empirical evidence that human behavior frequently does not conform to the neoclassical model, one has to take the criticisms seriously. On the other hand, one does not lightly discard a highly powerful and very useful model of human choice-making behavior.

The stance that we take in this seminar is that one should retain the neoclassical or game theoretical model as one, but not the exclusive, model of the individual to be used in conducting institutional analyses. In other words, this is one of the tools of the trade, and an institutional analyst should know this tool well. Knowing a tool well means knowing its capabilities and its limitations. This model is particularly useful in regard to the following three tasks:

1. Undertaking a theoretical analysis of what a fully informed and narrowly self-interested person would do in a particular type of well-defined situation.

James Buchanan has frequently argued that an essential analysis of any particular institutional arrangement must examine what strategies would be selected by individuals who are selfish, opportunistic, and calculating. If these strategies lead to optimal outcomes for others - as they do in a highly competitive market - the institutional arrangement is quite robust to the type of individuals who will be using it. If these strategies lead to sub-optimal outcomes, then one is alerted to the problems that the naive use of the institutional arrangement might produce. The use of the neoclassical model of the individual enables one to examine how vulnerable a particular institutional arrangement is to the calculations of a narrow hedonist.

2. Undertaking a normative analysis of what fully “rational” persons should do in a particular type of highly structured and repetitive situation.

Many game theorists view game theory as a “theory of advice” for how to be rational in diverse situations. In light of many of our readings this semester, one might recast this normative view of game theory so that it is viewed as a theory of advice for individuals facing situations of relating to strangers where no trust and reciprocity has been developed. The same theory might not offer good advice for how to behave rationally in settings where individuals know each other’s identity, have established a real sense of community and reciprocity, and expect to relate to one another over a very long time. It is these latter problems that are causing a considerable amount of ferment and reconsideration among thoughtful scholars.

3. Undertaking a positive, theoretical analysis in those situations that are tightly constrained, where the actions and outcomes are clearly known, and where some single value - such as profit or likelihood of re-election - can serve as an external indicator of utility.

The key question facing institutional analysts who wish to undertake positive analyses of less structured and certain situations is what modifications in the neoclassical theory are the most likely to generate useful predictions in particular kinds of settings? Thinking of human behavior as adaptive is the approach

that is discussed by Vincent Ostrom and Brian Jones. Herbert Simon retains the fundamental presumption that individuals compare benefits against costs but relaxes the assumptions about how finely values are measured and the type of calculation process presumed. If one adds to the important work of Simon, the work of Kahneman and Tversky (and others) on perception and framing effects and of Coleman (and others) on the adoption of norms of behavior, one begins to gain a model of a fallible learner who develops routines, heuristics, or SOPs (standard operating procedures) for coping with much of life that may reflect more or less opportunistic behavior dependent upon both personal and social developments.

Recent work on evolutionary theory applied to language, culture, and social relations is also providing useful insights into the central questions we will be addressing. We do need to develop an integrated approach in the social sciences that does not see our approach as totally apart from the biological foundations of human behavior. In an institutional milieu that is highly competitive, the external structure may be so selective that those who survive can be thought of as having maximized whatever value is needed for survival. But, many environments do not have such strong selection pressures. Thus, the neoclassical model becomes one - but not the only - model of the individual that the institutional analyst can use. In his classic article on "rationality," Popper gives us some very good advice: rest as much of your analysis on the structure of the situation rather than on the model of the individual.

Essential Readings for Week 5:

Benkley, Yochai. 2008. "Law, Policy, and Cooperation." Paper presented at Conference on Government and Markets: Toward a New Theory of Regulation."

Bianco, William T. 1998. "Different Paths to the Same Result: Rational Choice, Political Psychology, and Impression Formation in Campaigns." *American Journal of Political Science* 42:1061-1081.

***Oncourse**

Bowles, Samuel. 1998. "Endogenous Preferences: The Cultural Consequences of Markets and Other Institutions." *Journal of Economic Literature* 36 (March): 75-111. ***Oncourse**

Janssen, Marco, and Elinor Ostrom. 2006. "Adoption of a New Regulation for the Governance of Common-Pool Resources by a Heterogeneous Population." In *Inequality, Cooperation, and Environmental Sustainability*, ed. Jean-Marie Baland, Pranab Bardhan, and Samuel Bowles, 60–96. Princeton: Princeton University Press. ***Oncourse – R06-38**

McElreath, Robert Boyd, and Peter J. Richerson. 2003. "Shared Norms and the Evolution of Ethnic Markers." *Current Anthropology* 44(1):122-129. ***Oncourse**

North, Douglass C. 2005a. Chapter 7: "The Evolving Human Environment." In *Understanding the Process of Economic Change*, 87-102. Princeton: Princeton University Press. ***Oncourse**

_____. 2005b. Chapter 9: "Getting it Right and Getting it Wrong." In *Understanding the Process of Economic Change*, 116-126. Princeton: Princeton University Press. ***Oncourse**

Ostrom, Elinor. 2005. Chapter 4: "Animating Institutional Analysis." In *Understanding Institutional Diversity*, 99-133. Princeton: Princeton University Press. ***Required Text**

Poteete, Amy, Elinor Ostrom, and Marco Janssen. 2010. Chapter 9: "Pushing the Frontiers of the Theory of Collective Action and the Commons." In *Working Together: Collective Action, the Commons, and Multiple Methods in Practice*, 215-247. Princeton: Princeton University Press. ***Required Text**

Weissing, Franz J., and Elinor Ostrom. 2000. Chapter 13: "Irrigation Institutions and the Games Irrigators Play: Rule Enforcement on Government- and Farmer-Managed Systems." In *Polycentric Games and Institutions: Readings from the Workshop in Political Theory and Policy Analysis*, 366-398. Ann Arbor, MI: University of Michigan Press. ***Required Text**

Supplemental Readings for Week 5:

- Alchian, Armen. 1950. "Uncertainty, Evolution and Economic Theory." *Journal of Political Economy* 63:211-221.
- Anderson, John R. 1980. *Cognitive Psychology and Its Implications*. San Francisco, CA: W.H. Freeman.

Week 6: October 5 - Learning from Experiments

One method of studying collective action dilemmas is by designing and running experiments where one is able to change underlying structural aspects one by one. We will discuss some of the key aspects of experimental research this week and then do an experiment in the Lab in Woodburn Hall next week.

Essential Readings for Week 6:

- Bianco, William T., Michael S. Lynch, Gary J. Miller, and Itai Sened. 2006. "A Theory Waiting to Be Discovered and Used: A Reanalysis of Canonical Experiments on Majority-Rule Decision Making." *The Journal of Politics* 68(4) (November): 838-851. ***Oncourse**
- Cardenas, Juan-Camilo. 2003. "Real Wealth and Experimental Cooperation: Experiments in the Field Lab." *Journal of Development Economics* 70:263-89. ***Oncourse**
- Cox, James, Elinor Ostrom, James Walker, Antonio Jamie Castillo, Eric Coleman, Robert Holahan, Michael Schoon, and Brian Steed. 2009. "Trust in Private and Common Property Experiments." *Southern Economic Journal* 75(4) (April): 957-975. ***Oncourse – R09-15**
- Falk, Armin. 2009. "Lab Experiments are a Major Source of Knowledge." *Science* 326(525):535-538. ***Oncourse**

Güth, Werner, and Hartmut Kliemt. 1998. "The Indirect Evolutionary Approach: Bridging the Gap Between Rationality and Adaptation." *Rationality and Society* 10(3):377-399. ***Oncourse**

Janssen, Marco, Robert Holahan, Allen Lee, and Elinor Ostrom. 2010. "Lab Experiments for the Study of Social-Ecological Systems." *Science* 328(5978) (April 30): 613–617. ***Oncourse – R10-9**

Leibbrandt, Andreas, and Lauri Sääksvuori. 2010. "More than Words: Communication in Intergroup Conflicts. Working Paper. ***Oncourse**

Lopez, Maria Claudia, John Stranlund, Jim Murphy, and John Spraggon. "Internal Punishment Systems and External Regulation: Complementarities in the Field." Working Paper. Amherst: University of Massachusetts-Amherst, Department of Resource Economics. ***Oncourse**

Ostrom, Elinor. 2005. Chapter 3: "Studying Action Situations in the Lab." In *Understanding Institutional Diversity*, 69-98. Princeton: Princeton University Press. ***Required Text**

Poteete, Amy, Marco Janssen, and Elinor Ostrom. 2010. Chapter 6: "Experiments in the Laboratory and the Field." In *Working Together: Collective Action, the Commons, and Multiple Methods in Practice*, 141-170. Princeton: Princeton University Press. ***Required Text**

Week 7: October 12 - Doing an Experiment in the Lab

This week we will meet in the IELab on the 2nd Floor of Woodburn Hall to do an experiment.

There are no additional readings for this week – an opportunity for you to catch up and begin thinking about your seminar paper.

Week 8: October 19 – Polycentric Approaches to Policy

Having spent two weeks on the use of experiments to study collective action dilemmas, we will now turn to research based on field studies. I would recommend reading the chapters from the Poteete et al., volume first as they discuss an extensive body of studies and some of the real challenges involved in doing field research on collective action.

Essential Readings for Week 8:

Auer, Matthew. 2006. "Contexts, Multiple Methods, and Values in the Study of Common-Pool Resources." *Journal of Policy Analysis and Management* 25(1):215-227. ***Oncourse**

Hamilton, Lee. "There is No Substitute for Robust Oversight." Newsletter of the Center on Congress at Indiana University, June 9, 2010. ***Oncourse**

Ostrom, Elinor. 1999. Chapters 7-10: Part III. "Empirical Research on Police Services." In *Polycentricity and Local Public Economies: Readings from the Workshop in Political Theory and Policy Analysis*, ed. Michael D. McGinnis. Ann Arbor, MI: University of Michigan Press. ***Required Text**

_____. 2005. Chapter 8: "Using Rules as Tools to Cope with the Commons." In *Understanding Institutional Diversity*, 219-254. Princeton: Princeton University Press. ***Required Text**

_____. Forthcoming. "Polycentric Systems for Coping with Collective Action and Global

Environmental Change.” *Global Environmental Change* 20(4) (October 2010).

_____. 1999b. Chapter 5: “Polycentricity (Part 2).” In *Polycentricity and Local Public Economies: Readings from the Workshop in Political Theory and Policy Analysis*, ed. Michael D. McGinnis, 119-138. Ann Arbor, MI: University of Michigan Press. ***Required Text**

Ostrom, Vincent, Charles M. Tiebout, and Robert Warren. 1999. Chapter 1: “The Organization of Government in Metropolitan Areas: A Theoretical Inquiry.” In *Polycentricity and Local Public Economies*, ed. Michael McGinnis, 31-51. Ann Arbor, MI: University of Michigan Press. ***Required Text**

Poteete, Amy, Marco Janssen, and Elinor Ostrom. 2010. Chapters 3-5. In *Working Together: Collective Action, the Commons, and Multiple Methods in Practice*. Princeton: Princeton University Press. ***Required Text**

Supplemental Readings for Week 8:

Bendor, Jonathan, and Dilip Mookherjee. 1987. “Institutional Structure and the Logic of Ongoing Collective Action.” *American Political Science Review* 81(1) (March): 129-154.

Cohen Michael D. 1981. “The Power of Parallel Thinking.” *Journal of Economic Behavior and Organization* 2:285-306.

Ostrom, Vincent. 1991. *The Meaning of American Federalism: Constituting a Self-Governing Society*. San Francisco, CA: ICS Press.

_____. 2007. *The Political Theory of a Compound Republic: Designing the American Experiment*. 3rd ed. Lanham, MD: Lexington Books.

Ostrom, Vincent, and Elinor Ostrom. 1999. Chapter 4: “A Behavioral Approach to the Study of Intergovernmental Relations.” In *Polycentricity and Local Public Economies: Readings from the Workshop in Political Theory and Policy Analysis*, ed. Michael D. McGinnis, Chapter 4. Ann Arbor: University of Michigan Press.

Painter, Martin. 1991. “Intergovernmental Relations in Canada: An Institutional Analysis.” *Canadian Journal of Political Science* 24(2) (June): 269-288.

Sproule-Jones, Mark. 1991. “Evaluation.” In *Governments at Work: Canadian Parliamentary Federalism and Its Public Policy Effects*, ed. Mark Sproule-Jones, 263-274. Toronto: University of Toronto Press.

Tiebout, Charles. 1956. “A Pure Theory of Local Expenditures.” *Journal of Political Economy* 64: 416-424.

Weingast, Barry R. 2006. “Second Generation Fiscal Federalism: Implications for Decentralized, Democratic Governance, and Economic Development.” Working Paper. Stanford: Stanford University, Department of Political Science.

Week 9: October 26 - Policy Application: Health Care as a Commons

During the spring of 2010, several colleagues involved in health care in Bloomington as well as other locations inquired as to whether we could consider health care as a commons. We had some very good face-to-face discussions, and it became apparent that some of the theoretical and methodological breakthroughs we had reached in relation to studying the police industry in metropolitan areas would broadly speak to puzzles related to health care in diverse communities.

Claudia Brink helps us organize a Health Care Working Group that has grown to involve scholars from around a dozen organizations across the country that have had monthly web meetings exchanging insights into how the healthcare industry is organized.

We are in the early stages of planning a comparative study of the health care industry in several communities. We are likely to have a Planning Group Meeting here in Bloomington this November to make more definite plans for that study. If there are any graduate students in Y673 who are interested in participating, do let me know. Claudia Brink will be a participant in this seminar, and she can brief students who may be interested before our discussion in Week 9. We will include a number of scholars who have participated in the Working Group in our class meeting on October 26.

Essential Readings for Week 9:

Berwick, Donald M. 2009. "Squirrel." Plenary address for the 21st IHI Annual National Forum on Quality Improvement in Health Care, Orlando, Florida, December 8, 2009. ***Oncourse**

Bodenheimer, Thomas, and David West. 2010. "Low-Cost Lessons from Grand Junction, Colorado." *New England Journal of Medicine* 363(15):1391-1393.

Cassel, Christine K., and Troyen E. Brennan 2007. "Managing Medical Resources: Return to the Commons?" *Journal of the American Medical Association* 297(22) (June 13): 2518-2521. ***Oncourse**

Cook, David. n.d. "Creation of an Effective Health Care Market." Presentation for Y673 Seminar on Institutional Analysis and Development: Micro, Indiana University, Bloomington, IN, October 26, 2010. ***Oncourse**

Cook, David. n.d. "Getting Medical Care Right: A Tale of Misaligned Incentives, Unwarranted Variation, False Starts, and Politics." Presentation for Y673 Seminar on Institutional Analysis and Development: Micro, Indiana University, Bloomington, IN, October 26, 2010. ***Oncourse**

Cook, David. n.d. "Needless Variation, Misaligned Incentives, False Starts, and Politics." Presentation for Y673 Seminar on Institutional Analysis and Development: Micro, Indiana University, Bloomington, IN, October 26, 2010. ***Oncourse**

Fisher, Elliott S., Wennber, David E., Stukel, Thérèse A., Gottlieb, Daniel J., Lucas, F.L., and Étoile L. Pinder. 2003. "The Implications of Regional Variations in Medicare Spending. Part 1; The Content, Quality, and Accessibility of Care." *Annals of Internal Medicine* 138(4):273-288. ***Oncourse**

Gawande, Atul. 2009. "The Cost Conundrum." from *The New Yorker*, June 1, 2009. **Online:** http://www.newyorker.com/reporting/2009/06/01/090601fa_fact_gawande

Gawande, Atul. 2010. "Letting Go: What Should Medicine Do When it Can't Save Your Life?," from *The New Yorker*, August 2, 2010. **Online:** http://www.newyorker.com/reporting/2010/08/02/100802fa_fact_gawande

HRR Team. 2010. *The Cedar Rapids HRR*. Working Paper. ***Oncourse**

Hull Brown, Camilla. 2010. "Indiana and S. Ohio: Path to Achieving the Health Care Vision." Presentation for Y673 Seminar on Institutional Analysis and Development: Micro, Indiana University, Bloomington, IN, October 26, 2010. ***Oncourse**

Kaiser Permanente International. 2010. *Selected European Countries' Health Care Systems and the United States*. Washington, D.C.: Kaiser Permanente International. **Online:** http://xnet.kp.org/kpinternational/international/EuropeanHealthCareSystems_Comparison2010.pdf

McGinnis, Michael D. 2010. "Managing the Health Care Commons: Principles for Collaborative Community-Level Governance." Presentation for Y673 Seminar on Institutional Analysis and Development: Micro, Indiana University, Bloomington, IN, October 26, 2010. ***Oncourse**

Nichols, Len M., Micah Weinberg, Julie Barnes. 2009. *Grand Junction Colorado: A Health Community that Works*. Washington, D.C.: New American Foundation, Health Policy Program. ***Oncourse**

Thorson M., J. Brock, and Lynn J. Mitchell. Forthcoming. "Grand Junction, Colorado: How A Community Drew on Its Values to Shape a Superior Health System." *Health Affairs* (September 2010). ***Oncourse**

Supplemental Readings for Week 9:

Abelson, Reed. 2010. "A Health Insurer Pays More to Save." *New York Times*, June 21, 2010. **Online:** <http://www.nytimes.com/2010/06/22/business/22geisinger.html?scp=1&sq=geisinger&st=cse>

Fields, Daniel, Leshen, Elizabeth and Kavita Patel. 2010. "Analysis & Commentary: Driving Quality Gains and Cost Savings through Adoption of Medical Homes." *Health Affairs* 29(5):819-826. ***Oncourse**

Hiatt, Howard H. 1975. "Protecting the Medical Commons: Who is Responsible?" *New England Journal of Medicine* 293(5):235-241. ***Oncourse**

Hull Brown, Camilla. 2010. "Health Information Exchange: An Essential Component to Improving the Quality and Value of Health Care." Presentation for Y673 Seminar on Institutional Analysis and Development: Micro, Indiana University, Bloomington, IN, October 26, 2010. ***Oncourse**

Katz, Aaron, Amelia M. Bond, Emily R. Carrier, Elizabeth Docteur, Caroleen W. Quach, and Tracy Yee. 2010. "Cleveland Hospital Systems Expand Despite Weak Economy." Center for Studying Health System Change, Washington, DC. (Community Report Number 2 of 12). **Online:** http://www.rwjf.org/coverage/product.jsp?id=70068&cid=xtw_rwjf

Ostrom, Elinor. 1999. "Why do we Need Multiple Indicators of Public Service Outputs?" In *Polycentricity and Local Public Economies: Readings from the Workshop in Political Theory and Policy Analysis*, ed. Michael McGinnis, 163-75. Ann Arbor: University of Michigan Press. ***Required Text**

Strom, Stephanie. 2010. "\$45 Million Match is Pledge." *New York Times*, May 27, 2010. **Online:** http://www.nytimes.com/2010/05/28/us/28brfs-45MILLIONMAT_BRF.html

Week 10: November 2 - Policy Application: Sustainable Urban Neighborhoods

This has been an exciting year in regard to thinking about future research. In addition to doing research on health care as a commons, we are also beginning work with Maurice Luker, Michael Kelly, and Thomas Jones at Lafayette College in Pennsylvania on urban ecology – especially looking at how neighborhoods can organize efforts to reduce energy consumption and to increase the quality and quantity of urban trees. Burney Fischer and Sarah Mincey are working with colleagues in Indianapolis on a project involving planting and maintaining urban forests in a diversity of Indianapolis neighborhoods. We are also working with City of Bloomington and Monroe County officials on ways of engaging our communities in taking more actions toward reducing the emissions of greenhouse gases. We plan to engage in several related projects on this to be initiated at least by January 1, 2011.

Burney Fischer will join the discussion on Week 10.

Essential Readings for Week 10:

City of Binghamton. 2009. *The First Annual Design Your Own Park*. Announcement of a Competition.

Mincey, Sarah. 2010a. "A Memo Summarizing Bloomington, IN Neighborhood Research: Urban Forest Management Case Studies undertaken by SPEA's Urban Forest Management Course and the CIPEC-CRES Research Project." ***Oncourse**

_____. 2010b. General Meeting Notes from Workshop meeting with Lafayette College, July 15-16 2010. ***Oncourse**

Wilson, David Sloan, and Daniel T. O'Brien. "Promise Binghamton: A Science-Based Approach to Educational Improvement at a City-Wide Scale." Proposal submitted to the Obama Administration's Promise Neighborhood Initiative on June 28, 2010. ***Oncourse**

Several additional papers will be added to this list in the early part of the semester.

Supplemental Readings for Week 10:

Check out Majora Carter's website for an exciting view of what she and others did to transform a poor neighborhood in the South Bronx into a park and created green jobs to do so. **Online:** <http://www.majoracartergroup.com/our-story/>

Also the Business Alliance for Local Living Economies (BALLE) for discussion of a network of "socially responsible businesses" in over 80 communities in the US and Canada. **Online:** <http://www.livingeconomies.org/>

Week 11: November 9 - Applications of IAD or DOSES to your Puzzles

There are no new readings for this week to give you time to catch up with past weeks and to begin serious consideration of the puzzle that you intend to discuss in your own Mini-Conference paper. Everyone will be asked to write a one-page memo on the topic they have chosen for their seminar paper. In class, we will break into smaller groups and discuss the puzzles you have regarding key concepts and their applications in class.

Week 12: November 16 - Bureaucratic Forms of Organization and their Potential Control

Hierarchy has been viewed within public administration theory as one of the "ideal" forms of organization in which considerable control over subordinates is exercised by superiors. Recent work on institutional analysis has raised serious questions about this image. The key issue is how control is exercised both within bureaus and among bureaus. If you think Gary Miller is on to something, check out his full volume listed in the supplemental readings.

Essential Readings for Week 12:

Bianco, William T., and Robert H. Bates. 1990. "Cooperation by Design: Leadership, Structure, and Collective Dilemmas." *American Political Science Review* 84:133-47. ***Oncourse**

Miller, Gary J. 1990. "Managerial Dilemmas: Political Leadership in Hierarchies." In *The Limits of Rationality*, ed. Karen Cook, and Margaret Levi, 324-357. Chicago: University of Chicago Press.

***Oncourse**

Moe, Terry. 2005. "Power and Political Institutions." *Perspectives on Politics* 3:215-33. *Oncourse

Supplemental Readings for Week 12:

- Alchian, Armen, and Harold Demsetz. 1972. "Production, Information Costs, and Economic Organization." *American Economic Review* 62 (December): 777-795.
- Alchian, Armen, and Susan Woodward. 1988. "The Firm is Dead; Long Live the Firm: A Review of Oliver E. Williamson's *The Economic Institutions of Capitalism*." *Journal of Economic Literature* 26 (March): 65-79.
- Aoki, Masahiko, Bo Gustafsson, and Oliver E. Williamson. 1990. *The Firm as a Nexus of Treaties*. Newbury Park, CA: Sage.
- Auster, Richard, and Morris Silver. 1979. *The State as a Firm: Economic Forces in Political Development*. The Hague: Martinus Nijhoff.
- Barzelay, Michael. 1992. *Breaking through Bureaucracy. A New Vision for Managing in Government*. Berkeley: University of California Press.
- Borcherding, Thomas E. 1977. *Budgets and Bureaucrats: The Sources of Government Growth*. Durham, NC: Duke University Press.
- Breton, Albert, and Ronald Wintrobe. 1982. *The Logic of Bureaucratic Conduct: An Economic Analysis of Competition, Exchange, and Efficiency in Private and Public Organizations*. Cambridge: Cambridge University Press.
- Crozier, Michael. 1963. "The Social System at the Shop Level: The Plant Subculture and the Formal Authority System." In *The Bureaucratic Phenomenon*, 61-88. Chicago: University of Chicago Press.
- Downs, Anthony. 1967. *Inside Bureaucracy*. Boston: Little, Brown & Company.
- Fallers, Lloyd A. 1965. "A Century of Political Evolution." In *Bantu Bureaucracy: A Century of Political Evolution Among the Basoga of Uganda*, 126-154. Chicago: University of Chicago Press.
- Jensen, Michael, and William Meckling. 1976. "Theory of the Firm, Managerial Behavior, Agency Costs, and Ownership Structure." *Journal of Financial Economics* 3 (October): 305-359.
- Johnson, Ronald N., and Gary D. Libecap. 1994. *The Federal Civil Service System and the Problem of Bureaucracy*. Chicago: University of Chicago Press.
- Kay, Neil M. 1979. *The Innovating Firm: A Behavioral Theory of Corporate R & D*. New York: St. Martin's Press.
- Leibenstein, Harvey. 1981. "Microeconomics and X-Efficiency Theory: If There is No Crisis, There Ought to Be." In *The Crisis in Economic Theory*, ed. Daniel Bell and Irving Kristal, 97-110. New York: Basic Books.
- Marschak, Jacob. 1972. *Economic Theory of Teams*. New Haven: Yale University Press.
- McCubbins, Matthew D., Roger G. Noll, and Barry R. Weingast. 1989. "Structure and Process, Politics and Policy: Administrative Arrangements and the Political Control of Agencies." *Virginia Law Review* 75:431-482.
- Ouchi, William G. 1977. "The Relationship between Organizational Structure and Organizational Control." *Administrative Science Quarterly* 22 (March): 95-113.
- Putterman, Louis. 1995. "Markets, Hierarchies, and Information: On a Paradox in the Economics of Organization." *Journal of Economic Behavior and Organization* 26:373-390.
- Shleifer, Andrei, and Robert W. Vishny. 1993. "Corruption." *The Quarterly Journal of Economics* (August): 601-617.

Week 13: November 23 - Thanksgiving Break – NO CLASS

Happy Thanksgiving!

Week 14: November 30 - Puzzles and Challenges of Development

For the last half century, International Development Agencies (IDAs) have poured substantial sums into efforts to assist the developing world to achieve a higher economic and political level of development. Many of these efforts have led to very disappointing results. Several years ago, the Swedish International Development Agency (Sida) asked colleagues at the Workshop to undertake a study of Aid, Incentives, and Sustainability. Oxford University Press has asked us to revise our earlier report and make it more general. Since this is another application of our IAD approach to a puzzle in the world, we thought it would be useful to assign several of the chapters from the book entitled *The Samaritan's Dilemma* for this week of the seminar as well as Ed Araral's excellent article on the bureaucratic incentives compounded by international aid.

Essential Readings for Week 14:

Araral, Eduardo. 2005. "Bureaucratic Incentives, Path Dependence, and Foreign Aid: An Empirical Institutional Analysis of Irrigation in the Philippines." *Policy Sciences* 38(2-3) (September): 131-157. ***Oncourse**

Evans, Peter. 2004. "Development as Institutional Change: The Pitfalls of Monocropping and Potentials of Deliberation." *Studies in Comparative International Development* 38(4) (Winter): 30-52. ***Oncourse**

Gibson, Clark, Krister Andersson, Elinor Ostrom, and Sujai Shivakumar. 2010. Chapter for a Festschrift in honor of Partha Dasgupta drawing on findings from the *The Samaritan's Dilemma: The Political Economy of Development Aid*.

Ramalingam, Ben, and Harry Jones. 2008. "Exploring the Science of Complexity: Ideas and Implications for Development and Humanitarian Efforts." Working Paper 285. London: Overseas Development Institute. ***Oncourse**

Supplemental Readings for Week 14:

Lansing, J. Stephen. 2006. *Perfect Order. Recognizing Complexity in Bali*, Chapters 1 and 7. Princeton: Princeton University Press.

Sawyer, Amos. 2005. *Beyond Plunder: Toward Democratic Governance in Liberia*, Chapters 1, 3, and 9. Boulder, CO: Lynne Rienner Publishers.

Week 15: December 7 - Further Development of PIASES Framework

Analysis of institutional change is among the most difficult topics to be covered in this semester. Many different variables potentially affect how individuals constitute and change institutions over time. For some scholars, institutional change has been viewed as a process leading to ever better institutions. For others, it is simply the result of the most powerful exerting their continued dominance over a situation. An institutional analyst must recognize that changes in rules do not always lead to increased welfare both because of ignorance and because of opportunistic behavior. A key question is how to analyze changes of rules within rules so as to understand under what conditions individuals may improve their general welfare with time.

Essential Readings for Week 15:

Gamm, Gerald, and John Huber. 2002. "Legislatures as Political Institutions: Beyond the Contemporary

Congress.” In *Political Science: State of the Discipline* (Centennial Edition), 313-341. New York: W.W. Norton. *Oncourse

Hooghe, Liesbet, and Gary Marks. 2001. Chapter 1, Appendices 1 and 2. In *Multi-Level Governance and European Integration*. Lanham, MD: Rowman & Littlefield Publishers. *Oncourse

Knight, Jack. 1992. Chapters 3 and 5. In *Institutions and Social Conflict*. New York: Cambridge University Press. *Oncourse

McGinnis, Michael D. 2010. “Institutional Analysis, Game Models, and Polycentric Governance: Contextualizing IAD via Networks of Adjacent Action Situations.” Paper prepared for discussion at the 2010 Annual Meeting of the American Political Science Association, Sept. 2-5, 2010, Washington, D.C., in Theme Panel: Institutional Analysis and Development: Development and Promise. *Oncourse – W10-17

Supplemental Readings for Week 15:

Aldrich, John H. 1994. “A Model of a Legislature with Two Parties and a Committee System.” *Legislative Studies Quarterly* 19(3):313-339.

Bianco, William T., Michael S. Lynch, Gary J. Miller, and Itai Sened. 2004. “‘A Theory Waiting to be Discovered and Used’: A Reanalysis of Canonical Experiments on Majority Rule Decision Making.” Working Paper. University Park: Penn State, Department of Political Science.

Bianco, William T., and Itai Sened. 2005. “Uncovering Evidence of Conditional Party Government: Reassessing Majority Party Influence in Congress and State Legislatures.” *American Political Science Review* 99(3) (August): 361-371.

Brennan, Geoffrey, and James M. Buchanan. 1985. “Is Constitutional Revolution Possible in Democracy?” In *The Reason of Rules: Constitutional Political Economy*, 134-50. Cambridge: Cambridge University Press.

Buchanan, James, and Gordon Tullock. 1962. *The Calculus of Consent: Logical Foundations of Constitutional Democracy*. Ann Arbor: University of Michigan Press.

Cornell, Stephen, and Joseph P. Kalt. 1995. “Cultural Evolution and Constitutional Public Choice: Institutional Diversity and Economic Performance on American Indian Reservations.” Working Paper. Cambridge, MA: Harvard University, Kennedy School of Government, Faculty Research Working Paper Series R95-8.

Cox, Gary, and Mathew McCubbins. 2002. “Agenda Power in the U. S. House of Representatives, 1877 to 1986. Working Paper.

Feeny, David. 1988. “The Demand for and Supply of Institutional Arrangements.” In *Rethinking Institutional Analysis and Development*, ed. Vincent Ostrom, David Feeny, and Hartmut Picht, 159-209. San Francisco, CA: ICS Press.

Firmin-Sellers, Kathryn. 1999. “The Concentration of Authority: Constitutional Creation in the Gold Coast, 1950.” In *Polycentric Governance and Development: Readings from the Workshop in Political Theory and Policy Analysis*, ed. Michael D. McGinnis, 186-208. Ann Arbor: University of Michigan Press.

Haney, Patrick, Roberta Herzberg, and Rick K. Wilson. 1992. “Advice and Consent: Unitary Actors, Advisory Models and Experimental Tests.” *Journal of Conflict Resolutions* 36 (December): 603-633.

Hechter, Michael, Karl-Dieter Opp, and Reinhard Wippler. 1990. *Social Institutions: Their Emergence, Maintenance, and Effects*, Introduction and Chapters 1-3. New York: de Gruyter.

Heckathorn, Douglas D., and Steven M. Maser. 1987. “Bargaining and Constitutional Contracts.” *American Journal of Political Science* 31(1) (February): 142-168.

Herzberg, Roberta . 1992. “An Analytic Choice Approach to Concurrent Majorities: The Relevance of John C. Calhoun’s Theory for Institutional Design.” *Journal of Politics* 52 (February): 54-81.
